Mosler TAPEGUARD
after 4-hour test at
2000°F. Temperature of
interior remained be-
low 150°F.

Unharmed tape is
shown after 4-hour
furnace test. No loss of
information occurred on
any tapes.

NOW... MOSLER TAPEGUARD

OFFERS YOU COMPLETE PROTECTION FOR DATA PROCESSING TAPES AND DISK PACKS AGAINST
FIRE • SMOKE • MOISTURE • DUST

TAPEGUARD provides the special protection required for data processing tapes and disk packs . . . protection that ordinary safes cannot give. It is actually two safes in one:

FIRE SAFE . . . The outer safe is a Mosler Double Door "A" Label Record Safe, approved by the Underwriters' Laboratories to protect paper records for four hours from external temperatures reaching 2000°F.

HUMIDITY SAFE . . . The inner safe has a gasket and is pressure sealed when closed to assure protection against free moisture released by the insulation of the outer safe during a fire. Its insulated walls and the air barrier between the outer and inner safes further reduce the interior temperature.

PROVED BY TESTS . . . TAPEGUARD holds interior temperature below the 150° safety limit in a 4-hour test with outside temperatures reaching 2000°F.

TAPEGUARD is designed to be used right in your computer area . . . saving the time and expense of off-premise storage.

Don't gamble on the safety of your valuable data processing tapes . . . investigate TAPEGUARD, now with the greatest tape & disk pack capacity on the market! The enclosed card will bring you full information, without obligation.

THE "SAFE RANGE"

Data processing tapes are extremely sensitive to heat. Even though it may require temperatures from 400° to 500°F. to actually ignite most tapes, tests have proved they lose information from temperatures as low as 150°. Starting at this point the physical characteristics of the tape begin to change causing a corresponding loss of information. This was verified recently by the leading computer manufacturer who tested plastic reels and containers, and four types of tape. The test report states that the "high temperature limit" for both reels, containers, and all four types of tape is 150°.

are your valuable data processing tapes adequately protected?
